Why choose MERIT Portable Toilets?

The MERIT Portable Toilet is designed and built in Australia and is manufactured to stringent standards to achieve the two primary requisites of strength and hygiene. These qualities have been achieved with a surprisingly cost efficient result.

Features:

- One piece shell
- Total ventilation – bottom to top
- Unbreakable mirror
- Handy Shelf
- Lifting & tie down points
- Australian made
- Skid base never rusts
- No wall joints to loosen and come apart
- Resistant to graffiti
- Very hygienic and cleaner friendly

COLOURS AVAILABLE FOR BOTH STANDARD & SEWER CONNECT MODELS

- | | | | |
|---|---|--|---|
|  Play Blue |  Magenta |  Yellow |  Beige |
|  Green |  Light Green |  Purple |  Teal |

Easy to maintain

The one piece shell makes cleaning a breeze with no corner joints and a smooth plastic surface.

Strong

The Outer shell is a one-piece structure, rather than separate pieces connected together. This provides a superior strength unit which is easier to clean, ensuring a long life of trouble free, low maintenance use.

Flexible in design

Made of U.V. treated HDPE, the MERIT Portable Toilet is built to withstand the toughest Australian conditions whilst at the same time boasting world class appearance.

Filling the Fresh Water Tank

To fill the fresh water tank is an easy process of simply removing the filler cap and inserting a garden hose and fill to the top.

Emptying the Fresh Water Tank

When it is time to empty out the excess fresh water from the tank simply unscrew the cap found in the front bottom left corner of the hand basin unit. Ensure the cap is in safe keeping until the unit has drained then replace the cap - screw the cap in firmly to prevent any leakage.

Flushing with Hand Pump

Flushing is easy, simply raise and lower the handle several times to cause flow of water to flush the bowl.

Trailer Mounted

The trailer mounted option is ideal for situations where mobility is paramount such as on farms when workers are moving from paddock to paddock.

Sewer Connect

Sewer connect is ideal when access to a pump out service is not available or for long term situations such as large construction projects.

Rear Evacuation

The rear evacuation valve is used to empty waste from the waste storage tank. Hoses and connectors are available to make waste removal an easy process.
